

LANKA SRI NAGA SIVA RAMA KRISHNA REVANTH

Hyderabad | 9948292640/7981941010 | revanth.lanka@gmail.com

Professional Summary

Quality Engineering professional with 6 years 8 months of experience in enterprise banking applications, specializing in REST API testing, API automation, and IVR automation using Cyara. Experienced in designing and executing functional, integration, regression, negative, smoke, SIT, and end-to-end testing across distributed IVR, middleware, and host systems. Strong hands-on experience with Postman, Bruno, JavaScript, Node.js, Cucumber BDD, and CI/CD pipelines using Harness. Skilled in API request/response validation, JSON payloads, business-rule validation, log analysis, defect root cause analysis, service virtualization, and production troubleshooting. Experienced in developing reusable automation frameworks, supporting API quality processes, conducting code reviews, mentoring four testers, and collaborating with developers, architects, business teams, and cross-functional stakeholders in Agile/Scrum environments.

Core Competencies

API Testing	REST API Testing, API Automation, Request/Response Validation, JSON Validation, HTTP Methods, Headers, Status Codes, Authentication, Business Rule Validation
IVR Automation	Cyara, Velocity Campaigns, IVR Call Flow Automation, DTMF Testing, Speech Recognition Testing, Customer Authentication, Call Routing
Test Automation	Cucumber BDD, JavaScript, Java, Node.js, Gulp, Data-Driven Testing, Reusable Frameworks
Quality Engineering	Functional, Integration, Regression, Negative, Smoke, Sanity, SIT, E2E Testing, Test Strategy, Test Planning, Risk-Based Testing
CI/CD	Jenkins, Harness, UrbanCode Deploy(CIT Deployments), Automated Test Execution, Pipeline Integration
Defect & RCA	JIRA, Xray, HP ALM, Splunk, Red Hat Linux openshift, PuTTY, Log Analysis, Root Cause Analysis, Defect Triage
Service Virtualization	Parasoft Virtualize, Stubbing (Virtual Assets), Live Invocation (Message Proxy)
Development Practices	Git, Feature Branching, Pull Requests, Peer Code Reviews, Agile/Scrum, BDD

Professional Experience

TCS <i>Systems Engineer</i>	Hyderabad <i>6 Years 8 months</i>
---------------------------------------	---

- Led end-to-end quality engineering activities for enterprise banking applications, with primary expertise in IVR automation, REST API testing, API automation, middleware validation, and integration testing.
- Designed, automated, and executed end-to-end IVR call flows using Cyara, covering customer authentication, balance enquiry, card services, retail, nonretail, mortgages, motorfinance, pensions, insurance, payments, call routing, and other banking journeys.
- Validated DTMF and speech recognition inputs to ensure accurate IVR interactions, reliable call routing, and seamless customer journeys.
- Developed and executed Velocity Campaigns for data-driven IVR regression testing, improving execution scalability and test coverage across large test suites.
- Performed REST API testing using Postman and Bruno, validating request and response payloads, headers, HTTP status codes, authentication, JSON data, and business rules for middleware services supporting IVR applications.
- Developed and maintained reusable API automation frameworks using Node.js, JavaScript, Cucumber BDD, and Gulp, implementing reusable step definitions and data-driven test scenarios.
- Applied API automation using Cucumber BDD with JavaScript for REST API automation.
- Executed functional, smoke, regression, System Integration Testing (SIT), sanity, and end-to-end testing across IVR, middleware, and host systems.
- Performed backend validation and root cause analysis by analyzing middleware and host logs using Red Hat Linux, PuTTY, and Splunk to diagnose complex failures and support defect resolution.
- Utilized Parasoft Virtualize for service virtualization, stubbing, and live invocation to enable testing when dependent systems were unavailable or constrained.
- Prepared Test Plans, Test Scenarios, Execution Reports, and End of Test Reports (EOTR), while coordinating test data preparation with internal teams.
- Managed defects using JIRA-Xray and HP ALM, collaborating with developers and business teams through defect triage, retesting, root cause analysis, and closure.
- Executed automation suites through Jenkins CI/CD pipelines and Migrated pipelines from Jenkins to Harness by adapting build and execution workflows, validating pipeline executions, and maintaining integration with the existing automation framework.
- Performed application deployments by promoting builds from DEV to CIT environments using UrbanCode Deploy and supported validation across integration environments.

- Followed Git-based development practices including feature branching, pull requests, peer code reviews, and collaborative maintenance of automation assets.
- Generated and analyzed Cucumber execution reports and automation metrics for regression cycles, communicating test results and quality status to stakeholders.
- Cross-skilled as a Middleware Engineer, supporting application changes from SIT through Production and troubleshooting issues across IVR, middleware, and host layers.
- Mentored a team of four testers by providing technical guidance, knowledge-transfer sessions, automation code reviews, and delivery support to maintain quality and meet project timelines.
- Participated actively in Agile/Scrum ceremonies including sprint planning, daily stand-ups, backlog refinement, sprint reviews, and retrospectives.
- Upskilled in Playwright with Cucumber BDD and successfully cleared the organization’s internal competency assessment.

Education

Bachelor of Technology (B.Tech)	62.65%
Ellenki College of Engineering and Technology	
Electronics and Communication Engineering (ECE)	
Intermediate – MPC	86.5%
Narayana Junior College	
SSC	8.8 CGPA
MNR High School	

Certifications

- **GitHub Foundations (GH-900)** – GitHub, 2026
- **Selenium WebDriver with Java & TestNG Framework** – Udemy
- **Cucumber BDD Automation Framework** – Udemy
